ASSIGNMENT – 2

PYTHON PROGRAM FOR TEMPERATURE AND HUMIDITY

Student Name	MUGESHWARAN.G
Student Register Number	961819104058
Team ID	PNT2022TMID34458
Maximum Mark	2 Marks

PYTHON PROGRAM: -

```
a=int(input("Enter temperature value: "))
b=int(input("Enter humidity value: "))
def hightemp(x,y):
    if (x>=100):
        print("TEMPERATURE DETECTED IS HIGH: ",x)
        if (y>=90):
            print("HUMIDITY DETECTED IS HIGH: ",y)
            print("ENVIRONMENT IS IN GOOD CONDITION")
            print("BUZZER OFF")
        else:
            print("HUMIDITY DETECTED IS LOW: ",y)
            print("HAZZARD DETECTED")
            print("BUZZER ON")
    else:
        print("TEMPERATURE DETECTED IS LOW: ",x)
        print("PLESENT ENVIRONMENT CONDITION")
hightemp(a,b)
```

OUTPUT:-

Assume temperature to be ‘a’ and humidity to be ‘b’

(1) For a=100 & b=90

```
Enter temperature value: 100
Enter humidity value: 90
TEMPERATURE DETECTED IS HIGH:  100
HUMIDITY DETECTED IS HIGH:  90
ENVIRONMENT IS IN GOOD CONDITION
BUZZER OFF
```

(2)For a=70 & b=95

```
Enter temperature value: 70
Enter humidity value: 95
TEMPERATURE DETECTED IS LOW:  70
PLESENT ENVIRONMENT CONDITION
```

(3)For a=110 & b=89

```
Enter temperature value: 110
Enter humidity value: 89
```

TEMPERATURE DETECTED IS HIGH: 110
HUMIDITY DETECTED IS LOW: 89
HAZZARD DETECTED
BUZZER ON

(4)For a=110 & b=100
Enter temperature value: 110
Enter humidity value: 100
TEMPERATURE DETECTED IS HIGH: 110
HUMIDITY DETECTED IS HIGH: 100
ENVIRONMENT IS IN GOOD CONDITION
BUZZER OFF
